9. Notifications, chat and files
10. Employees and performance
11. Accounting and reports
12. Audit and system errors

13. Role workflows

14. Operational checklists

15. Troubleshooting and boundaries

1. Product purpose and scope

LoanHub is a multi-tenant loan marketplace and loan-management platform designed for Lesotho. Many independent lending companies use one platform while their operational data remains separated by company and, where configured, by branch. Borrowers submit funding requests, eligible lenders compete through offers, and the accepted lender services the resulting loan.

Figure 1. LoanHub users, applications, services and persistent stores.

Completed v1.0 modules

Module	What v1.0 provides
Accounts, authentication and sessions	Email/phone login, access tokens, refresh cookie, logout, account status and safe session recovery.
Multi-tenant company administration	Company registration/approval, branches, staff memberships, roles and active company selection.
Borrower profiles	Identity, contact, address, employment, affordability, consent and personal document context.
Loan-request marketplace	Broadcast requests, lender discovery, subscription/pay-per-request unlocks and competing offers.
Loan servicing	Accepted loans, disbursement, repayment schedules, allocations, overdue processing and completion.
Billing and payments	Plans, subscriptions, unlock charges, platform fees and provider-neutral payment records.
Notifications, audit and incidents	Persistent actionable alerts, audit transparency and grouped technical error monitoring.
Chat and presence	Direct/group chat, one shared socket per tab, online/offline state, typing, read state and voice notes.
Managed files	Permissioned uploads/downloads, checksums, encryption, visibility and report/voice-note storage.
Employees and performance	Employee profiles, managers, departments, goals, reviews

LoanHub v1.0 Product and Operations Guide

Module	What v1.0 provides
	and analytics.
Accounting	Chart of accounts, balanced journal entries, posting, trial balance, profit/loss and balance sheet.
Reports and midnight automation	Manual/scheduled PDF and CSV reports plus 00:00 Africa/Maseru reconciliation.

Production boundary

Live M-Pesa and EcoCash provider certification is not represented as complete. Provider credentials, signed callbacks, status enquiry, reversals and settlement reconciliation are required before real-money production use.

2. Branding and interface principles

LoanHub is the product/system identity. The square app icon is used for compact navigation and application identity; the horizontal LoanHub logo is used on entry, reports and primary product areas. The Ithute Solutions logo identifies the developer and maintenance provider and is displayed as a smaller credit.

- Readable names and business references are shown before raw UUIDs.
- Navigation changes by role, company status, branch scope and subscription.
- Responsive layouts support desktop, tablet and mobile use.
- Light, Dark and System themes are supported.
- The floating chat button remains available outside chat pages.
- Technical stack traces are never shown to ordinary users.

Figure 2. Illustrative sign-in experience and product branding.

3. System roles

Platform owner / SuperAdmin

Governs the multi-tenant platform, approves companies, configures plans, reviews platform accounting/reports, manages incidents and performs audited role switching.

- Review pending companies and incidents
- Monitor plans, payments and platform performance
- Use role switching only with a recorded support/testing reason
- Protect secrets, backups and migration discipline

Company owner

Highest authority inside a lending company.

- Maintain company details, branches, staff and products
- Oversee marketplace, loans, payments, accounting and reports
- Separate duties between finance, lending, collections and audit where possible

Company administrator

Coordinates day-to-day company operations.

- Maintain master data and staff scope

LoanHub v1.0 Product and Operations Guide

- Route work to specialist roles
- Review notifications, activity and incomplete workflows

Branch manager

Runs an assigned branch.

- Assign branch work
- Review active and overdue loans
- Monitor branch employees, goals and reports

Loan officer

Evaluates marketplace requests and prepares responsible offers.

- Review matching requests
- Unlock details only when authorised
- Check affordability and create compliant offers

Finance officer

Controls disbursement, repayment, reconciliation and accounting evidence.

- Verify payment references and status
- Reconcile provider result with LoanHub records
- Review journals and statements

Collections officer

Manages due and overdue repayment follow-up.

- Verify payment history before contact
- Record promises, disputes and escalation
- Follow respectful consumer-protection procedures

Compliance officer

Reviews access, consent, controls and regulatory exceptions.

- Review audit events and high-risk changes
- Collect evidence using reports and files
- Document remediation and escalation

Auditor

Performs independent, read-oriented review.

- Define scope and period
- Compare source events, approvals, payments and journals
- Use friendly references in findings

Customer support

Assists users without exceeding permissions.

- Verify the user safely
- Use request, loan, report or payment references
- Escalate finance, IT, compliance or lending issues

HR manager

Maintains workforce records and protected HR information.

- Maintain employee status and reporting lines
- Restrict salary/HR notes
- Coordinate performance-review periods

Performance manager

Creates goals and evidence-based reviews.

- Define measurable goals
- Track progress and quality
- Compare branches with context

Risk manager

Reviews credit, payment and operational risk.

- Monitor overdue/failure trends
- Investigate unusual activity
- Assign mitigations and monitor outcomes

IT support

Investigates availability and technical incidents.

- Use request IDs and fingerprints
- Reproduce safely in staging
- Patch root causes without editing financial history

Borrower

Creates funding requests and manages personal loans.

- Maintain profile and consent
- Compare total repayment, fees and term
- Track schedules, balances and approved payments

LoanHub v1.0 Product and Operations Guide

Company dashboard using the Dark theme.

5. Accounts, tenants and navigation

Figure 3. Authentication, role routing and selected-company resolution.

A user account stores authentication and global identity. Company users also require an active CompanyStaff membership. The active company is sent in the X-Company-ID header, and the backend verifies that the user belongs to that company. Company owners and administrators normally have company-wide scope; other roles become branch-scoped when their membership is assigned to a branch.

1. Open the official LoanHub URL.
2. Sign in with the registered email/phone and password.
3. Confirm the portal and active company shown in the navigation header.
4. Use the company selector when the account belongs to more than one tenant.
5. Sign out when leaving a shared computer.

6. Company and borrower onboarding

Company registration

6. Choose company registration.
7. Enter legal identity, registration/licence evidence and operating contacts.

LoanHub v1.0 Product and Operations Guide

8. Create the first company-owner account.
9. Submit the application in Pending status.
10. The platform owner reviews, approves, rejects or requests correction.
11. After approval, configure branches, staff, products and billing.

Borrower registration

12. Create an account and borrower profile.
13. Complete identity, contact, address and employment fields.
14. Record consent and supporting evidence.
15. Create a draft request, review it and broadcast it.

7. Marketplace and offers

Figure 4. Borrower request, lender access, offer competition and selection.

Borrower workflow

- Create a request with amount, purpose, term and consent.
- Monitor active offers and their expiry times.
- Compare amount, interest method, fees, instalment, term and total repayment.
- Accept one offer only after reviewing the complete cost.

Lender workflow

- Review redacted requests that match company products and risk appetite.
- Unlock full details only through an authorised subscription or pay-per-request workflow.
- Perform affordability and document checks.
- Create one compliant offer and monitor acceptance/expiry.

8. Loan servicing and payments

Figure 5. Offer acceptance, disbursement, repayment, allocation and accounting.

Disbursement

16. Confirm approval and agreement requirements.
17. Verify borrower payee details.
18. Create an outbound payment record.
19. Wait for verified provider/manual success evidence.
20. Generate or confirm the repayment schedule and activate the loan.

Repayment

21. Borrower initiates payment through an approved route.
22. LoanHub creates an inbound transaction with an idempotency key.
23. Provider callback/status or approved manual evidence confirms success.
24. The payment is allocated to instalments.
25. Balance/status and accounting entries update.

Payment rule

A Pending payment record is not proof of settlement. Never mark a payment successful without verified evidence.

9. Notifications, chat and files

Notifications

Notifications are persistent actionable events. Realtime delivery makes them immediate, but PostgreSQL persistence keeps them available after reconnect. Presence-only activity does not create business notification spam.

Chat

Figure 6. Chat message, voice note and managed-file security flow.

- Direct and group conversations.
- One shared WebSocket per browser tab.
- Online/offline and last-seen indicators.
- Typing and read state.
- Voice notes and PDF/image/Office attachments.
- Polling and reconnect fallback.

Files

Visibility	Who can access
Private	Uploader/owner only
Conversation	Active conversation participants
Branch	Assigned branch and authorised company management
Company	Active members of the same tenant
Confidential	Authorised management/platform administration

Visibility	Who can access
Platform	Platform administration

10. Employees and performance

Employee profiles link workforce information to active company staff. HR and management can maintain employee number, title, department, manager, branch, employment status and protected notes. Performance goals record target, period and progress; reviews record evidence and scores at employee, branch, company or platform level.

- Do not place salary, disciplinary or sensitive HR information in ordinary group chat.
- Use confidential file visibility for protected workforce evidence.
- Investigate data quality before using automated activity counts as a performance judgement.

11. Accounting and reports

Accounting

The accounting foundation uses a chart of accounts and balanced journal entries. Entries are prepared as Draft, reviewed and then Posted. Statements include trial balance, profit and loss and balance sheet. Chart bootstrap is idempotent and protected against simultaneous initialization.

Reports

Figure 7. Midnight reconciliation and automatic report generation.

Frequency	Period generated
Daily	Previous day
Weekly	Previous completed week, generated Monday
Monthly	Previous completed month, generated on day 1
Annual	Previous calendar year, generated on 1 January

Reports are generated in PDF and CSV for platform, company and branch scope, saved in managed media and made available for authorised download and printing.

12. Audit and system errors

Figure 8. Business notifications and restricted technical incident handling.

Audit history records actor, company, branch, entity, action, changed fields, request ID and timestamps. Technical failures are grouped by fingerprint. Ordinary users see a safe message and request reference; active platform owners receive the technical incident notification. Repeated incidents are rate-limited to prevent inbox spam.

13. Role workflows

Platform owner / SuperAdmin

Governs the multi-tenant platform, approves companies, configures plans, reviews platform accounting/reports, manages incidents and performs audited role switching.

Recommended routine

26. Review pending companies and incidents
27. Monitor plans, payments and platform performance
28. Use role switching only with a recorded support/testing reason
29. Protect secrets, backups and migration discipline

Control reminder

Use only the records and actions granted to this role. Escalate work that belongs to another specialist role rather than requesting excessive permissions.

Company owner

Highest authority inside a lending company.

Recommended routine

30. Maintain company details, branches, staff and products
31. Oversee marketplace, loans, payments, accounting and reports
32. Separate duties between finance, lending, collections and audit where possible

Control reminder

Use only the records and actions granted to this role. Escalate work that belongs to another specialist role rather than requesting excessive permissions.

Company administrator

Coordinates day-to-day company operations.

Recommended routine

- 33. Maintain master data and staff scope
- 34. Route work to specialist roles
- 35. Review notifications, activity and incomplete workflows

Control reminder

Use only the records and actions granted to this role. Escalate work that belongs to another specialist role rather than requesting excessive permissions.

Branch manager

Runs an assigned branch.

Recommended routine

- 36. Assign branch work
- 37. Review active and overdue loans
- 38. Monitor branch employees, goals and reports

Control reminder

Use only the records and actions granted to this role. Escalate work that belongs to another specialist role rather than requesting excessive permissions.

Loan officer

Evaluates marketplace requests and prepares responsible offers.

Recommended routine

- 39. Review matching requests
- 40. Unlock details only when authorised
- 41. Check affordability and create compliant offers

Control reminder

Use only the records and actions granted to this role. Escalate work that belongs to another specialist role rather than requesting excessive permissions.

Finance officer

Controls disbursement, repayment, reconciliation and accounting evidence.

Recommended routine

- 42. Verify payment references and status
- 43. Reconcile provider result with LoanHub records
- 44. Review journals and statements

Control reminder

Use only the records and actions granted to this role. Escalate work that belongs to another specialist role rather than requesting excessive permissions.

Collections officer

Manages due and overdue repayment follow-up.

Recommended routine

- 45. Verify payment history before contact
- 46. Record promises, disputes and escalation
- 47. Follow respectful consumer-protection procedures

Control reminder

Use only the records and actions granted to this role. Escalate work that belongs to another specialist role rather than requesting excessive permissions.

Compliance officer

Reviews access, consent, controls and regulatory exceptions.

Recommended routine

- 48. Review audit events and high-risk changes
- 49. Collect evidence using reports and files
- 50. Document remediation and escalation

Control reminder

Use only the records and actions granted to this role. Escalate work that belongs to another specialist role rather than requesting excessive permissions.

Auditor

Performs independent, read-oriented review.

Recommended routine

- 51. Define scope and period
- 52. Compare source events, approvals, payments and journals
- 53. Use friendly references in findings

Control reminder

Use only the records and actions granted to this role. Escalate work that belongs to another specialist role rather than requesting excessive permissions.

Customer support

Assists users without exceeding permissions.

Recommended routine

- 54. Verify the user safely
- 55. Use request, loan, report or payment references
- 56. Escalate finance, IT, compliance or lending issues

Control reminder

Use only the records and actions granted to this role. Escalate work that belongs to another specialist role rather than requesting excessive permissions.

HR manager

Maintains workforce records and protected HR information.

Recommended routine

- 57. Maintain employee status and reporting lines
- 58. Restrict salary/HR notes
- 59. Coordinate performance-review periods

Control reminder

Use only the records and actions granted to this role. Escalate work that belongs to another specialist role rather than requesting excessive permissions.

Performance manager

Creates goals and evidence-based reviews.

Recommended routine

- 60. Define measurable goals
- 61. Track progress and quality
- 62. Compare branches with context

Control reminder

Use only the records and actions granted to this role. Escalate work that belongs to another specialist role rather than requesting excessive permissions.

Risk manager

Reviews credit, payment and operational risk.

Recommended routine

63. Monitor overdue/failure trends
64. Investigate unusual activity
65. Assign mitigations and monitor outcomes

Control reminder

Use only the records and actions granted to this role. Escalate work that belongs to another specialist role rather than requesting excessive permissions.

IT support

Investigates availability and technical incidents.

Recommended routine

66. Use request IDs and fingerprints
67. Reproduce safely in staging
68. Patch root causes without editing financial history

Control reminder

Use only the records and actions granted to this role. Escalate work that belongs to another specialist role rather than requesting excessive permissions.

Borrower

Creates funding requests and manages personal loans.

Recommended routine

69. Maintain profile and consent
70. Compare total repayment, fees and term
71. Track schedules, balances and approved payments

Control reminder

Use only the records and actions granted to this role. Escalate work that belongs to another specialist role rather than requesting excessive permissions.

14. Operational checklists

Daily

- Unread actionable notifications

LoanHub v1.0 Product and Operations Guide

- New requests and expiring offers
- Pending disbursements and failed repayments
- Overdue instalments and collection follow-up
- Open chat/support cases
- System incidents and unposted journals

Weekly

- Branch performance and workload
- Collections and payment reconciliation
- Audit exceptions and role changes
- File/storage housekeeping
- Subscription limits and upcoming renewals

Monthly

- Profit/loss and balance sheet review
- Portfolio and overdue trend
- Company/branch reports
- Access and role review
- Backup restore test
- Recurring incident review

Annual

- Commercial plan review
- Licence and regulatory evidence
- Retention and privacy review
- Security and business-continuity test
- Provider reconciliation and contract review

15. Troubleshooting and boundaries

Problem	Likely cause	Safe action
Repeated WebSocket connections	More than one provider opened a socket or old frontend cache	Use the shared RealtimeProvider, close old tabs and clear .next
WebSocket 403	WebSocket session cookie/hostname mismatch	Use the same hostname and prepare the short-lived session before connecting
File upload fields missing	FormData sent with forced application/json	Do not set Content-Type manually; let the browser create the multipart boundary
Accounting bootstrap temporary 500	Concurrent chart initialization	Use the idempotent locked backend service and load accounts once
Payment remains pending	No verified provider confirmation	Do not mark success manually; perform authorised enquiry

LoanHub v1.0 Product and Operations Guide

Problem	Likely cause	Safe action
Page unavailable	Role, tenant, branch or company status restriction	Confirm active context and ask authorised management
Report missing	Worker stopped, invalid scope or storage problem	Generate manually and inspect worker/storage logs

External integrations

Official mobile-money settlement, report email delivery, S3/MinIO multi-server storage and enterprise malware scanning remain deployment/provider work, not completed v1.0 provider services.
