LoanHub - Lesotho Loan Marketplace

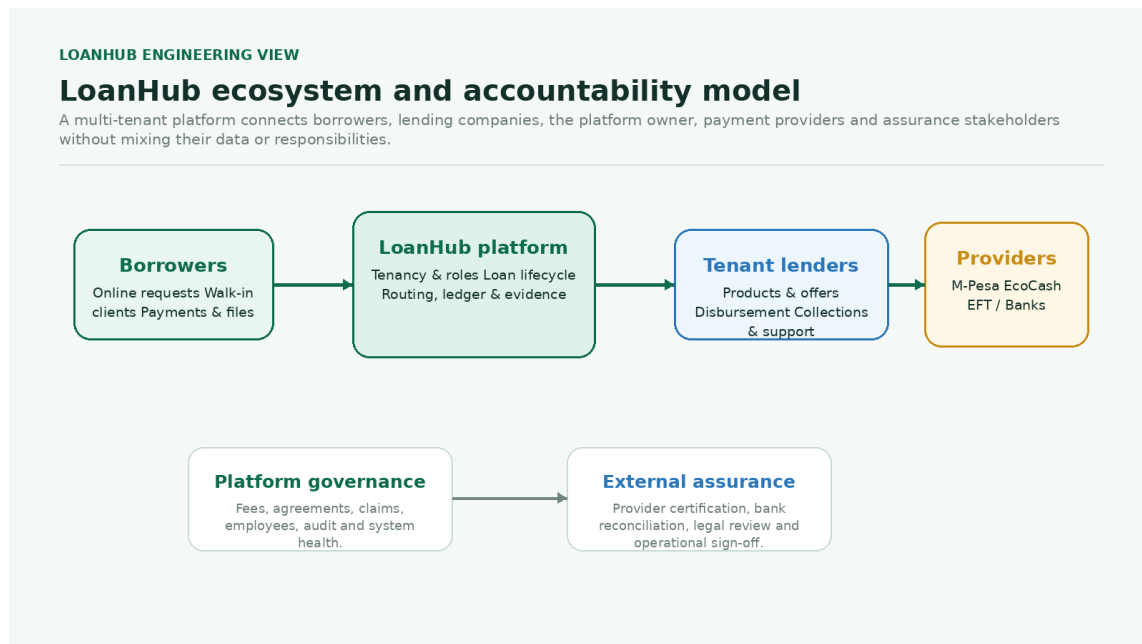

Developed by Ithute Solutions

Developed by Ithute Solutions | Release Candidate 1.0 | July 2026

LOANHUB PRODUCT PROSPECTUS

What LoanHub does

LoanHub is a multi-tenant lending marketplace and full loan-management platform. It enables borrowers to apply online, allows lending companies to serve walk-in and existing clients, manages offers and loan accounts, routes money electronically and retains operational evidence.

Illustrative interface/engineering view based on the analysed LoanHub release. Operational values are loaded from live records.

Commercial importance

It is not merely a loan calculator, payment page or customer list. It is a connected operating system for digital lending.

For borrowers Accessible requests, comparable offers and traceable payments.	For lenders One system for online, walk-in and direct loan operations.
For the owner Tenant governance, configurable revenue and oversight.	For assurance Evidence, reconciliation and controlled release.

Buyer conversation Relate this page to the prospect's current lending process and identify which manual, cash or fragmented step LoanHub will replace.

LOANHUB PRODUCT PROSPECTUS

The problem it solves

Many lenders rely on paper applications, unstructured spreadsheets, personal messaging, cash handover and isolated branch records. Borrowers repeat the same information and struggle to compare offers. Platform owners cannot easily prove how fees and transactions were calculated.

Commercial importance

LoanHub replaces fragmentation with a governed workflow and shared source of truth.

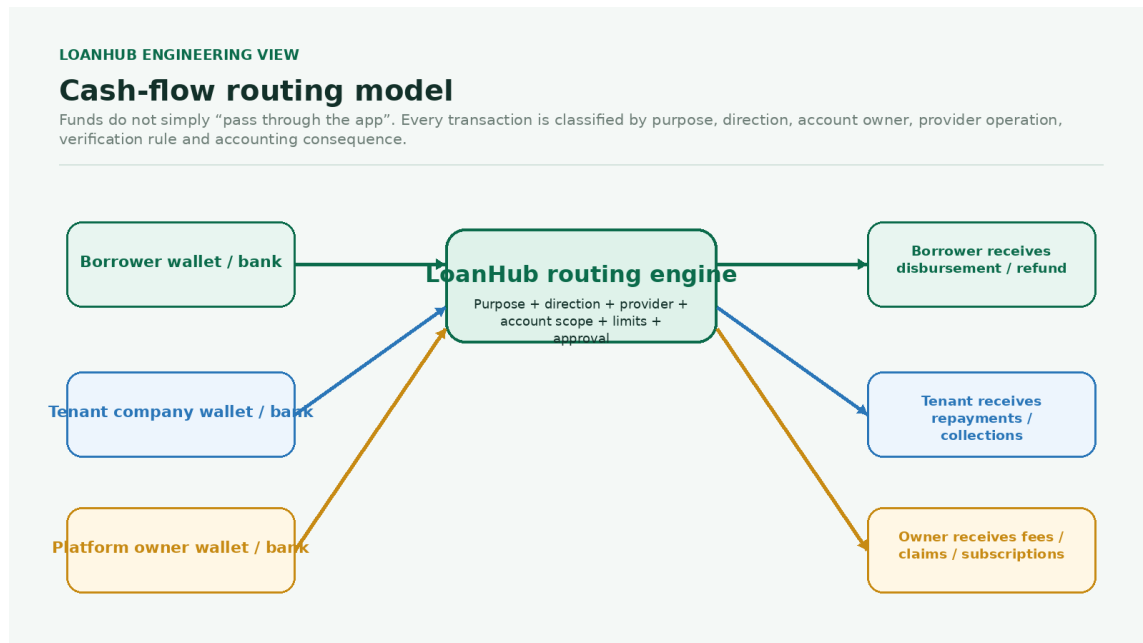

For borrowers Accessible requests, comparable offers and traceable payments.	For lenders One system for online, walk-in and direct loan operations.
For the owner Tenant governance, configurable revenue and oversight.	For assurance Evidence, reconciliation and controlled release.

Buyer conversation Relate this page to the prospect's current lending process and identify which manual, cash or fragmented step LoanHub will replace.

LOANHUB PRODUCT PROSPECTUS

Why cashless lending matters

Cash creates opportunities for theft, substitution, delayed posting, false receipts and staff-borrower disputes. Electronic instructions still require verification and reconciliation, but they create references and evidence that cash cannot provide.

Illustrative interface/engineering view based on the analysed LoanHub release. Operational values are loaded from live records.

Commercial importance

LoanHub is designed to reduce cash-in-hand exposure, not to pretend digital payments eliminate all fraud.

For borrowers Accessible requests, comparable offers and traceable payments.	For lenders One system for online, walk-in and direct loan operations.
For the owner Tenant governance, configurable revenue and oversight.	For assurance Evidence, reconciliation and controlled release.

Buyer conversation Relate this page to the prospect's current lending process and identify which manual, cash or fragmented step LoanHub will replace.

LOANHUB PRODUCT PROSPECTUS

Who buys and uses it

The commercial buyer may be a lending marketplace operator, lending network, microfinance organization, employer-based lender, branch-based lender or technology partner. Daily users include platform staff, tenant owners, branch teams, finance, collections and borrowers.

Commercial importance

The value is strongest where multiple companies or branches need common controls without sharing tenant data.

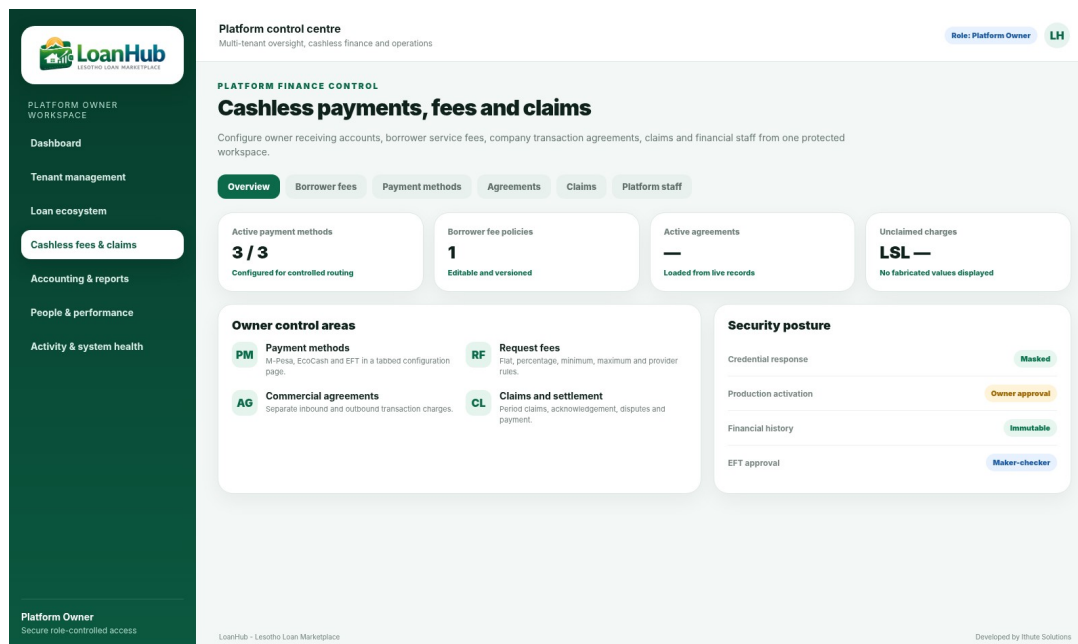

For borrowers Accessible requests, comparable offers and traceable payments.	For lenders One system for online, walk-in and direct loan operations.
For the owner Tenant governance, configurable revenue and oversight.	For assurance Evidence, reconciliation and controlled release.

Buyer conversation Relate this page to the prospect's current lending process and identify which manual, cash or fragmented step LoanHub will replace.

LOANHUB PRODUCT PROSPECTUS

Value to the platform owner

The owner can onboard tenants, configure owner payment methods, set borrower service fees, agree transaction charges, issue claims, create platform employees and supervise system health.

Illustrative interface/engineering view based on the analysed LoanHub release. Operational values are loaded from live records.

Commercial importance

This turns the platform into a governed commercial service rather than an unmanaged website.

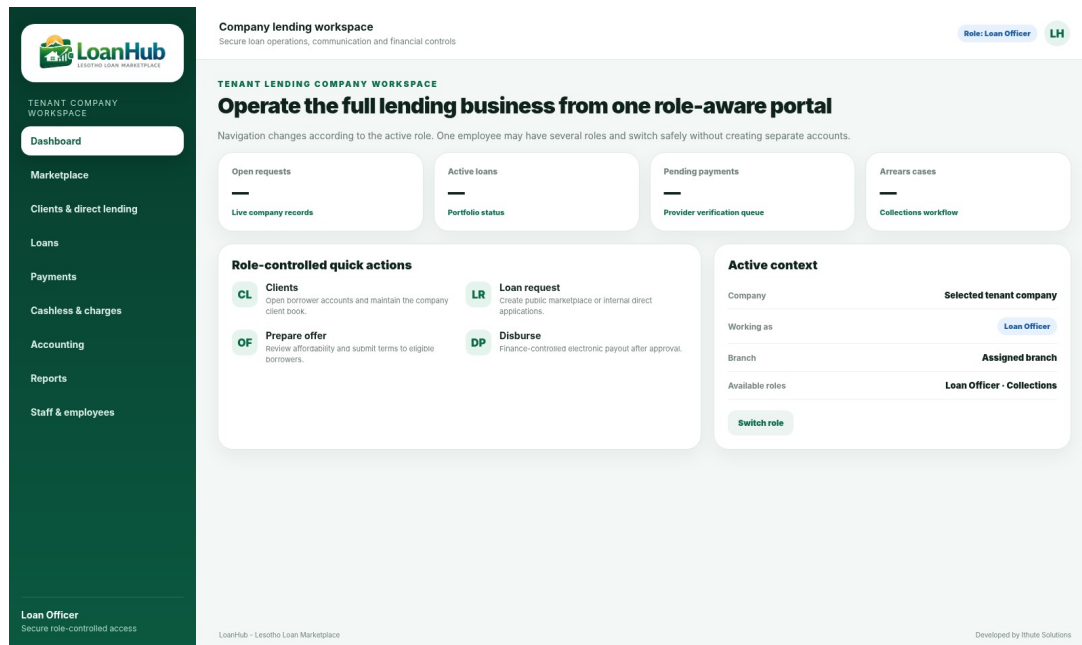

For borrowers Accessible requests, comparable offers and traceable payments.	For lenders One system for online, walk-in and direct loan operations.
For the owner Tenant governance, configurable revenue and oversight.	For assurance Evidence, reconciliation and controlled release.

Buyer conversation Relate this page to the prospect's current lending process and identify which manual, cash or fragmented step LoanHub will replace.

LOANHUB PRODUCT PROSPECTUS

Value to lending companies

A tenant gets client acquisition, online and walk-in lending, loan products, staff roles, branches, electronic payouts and collections, reports, communication and evidence.

Illustrative interface/engineering view based on the analysed LoanHub release. Operational values are loaded from live records.

Commercial importance

The company retains its own payment accounts and internal responsibilities.

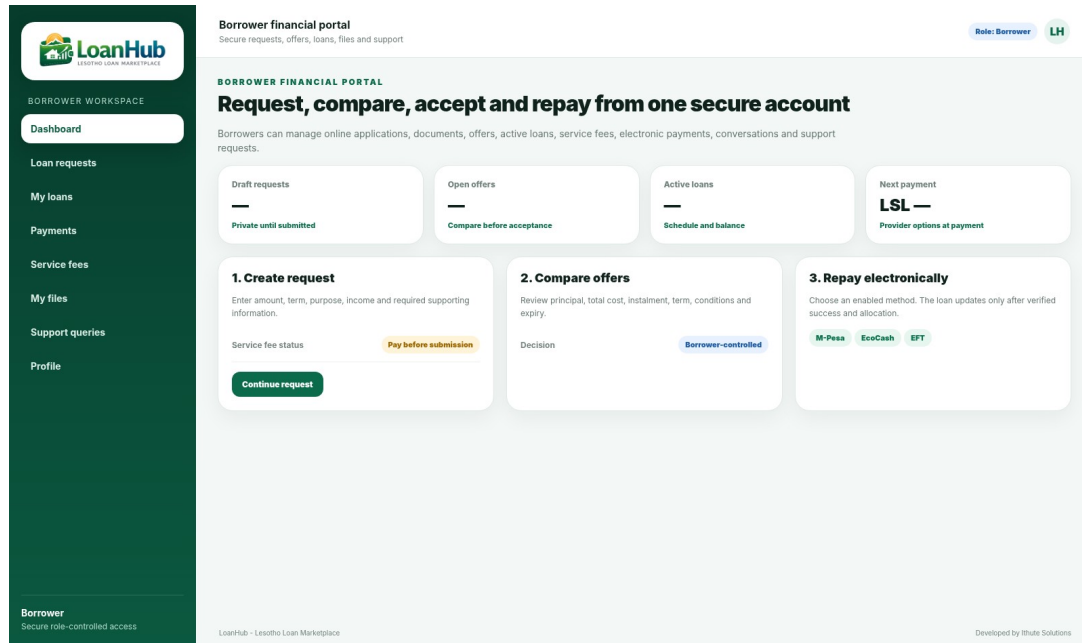

For borrowers Accessible requests, comparable offers and traceable payments.	For lenders One system for online, walk-in and direct loan operations.
For the owner Tenant governance, configurable revenue and oversight.	For assurance Evidence, reconciliation and controlled release.

Buyer conversation Relate this page to the prospect's current lending process and identify which manual, cash or fragmented step LoanHub will replace.

LOANHUB PRODUCT PROSPECTUS

Value to borrowers

A borrower gets one profile, online requests, offer comparison, a private record of loans and payments, service-fee transparency, documents, messages and support.

Illustrative interface/engineering view based on the analysed LoanHub release. Operational values are loaded from live records.

Commercial importance

The borrower chooses an offer and can verify references rather than relying only on verbal promises.

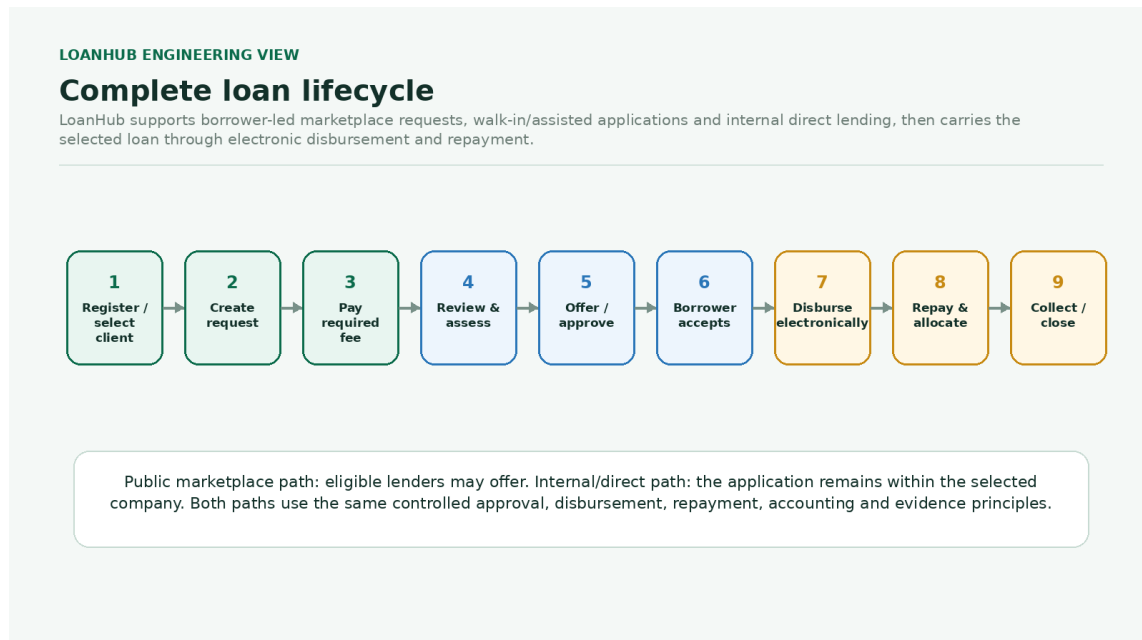

For borrowers Accessible requests, comparable offers and traceable payments.	For lenders One system for online, walk-in and direct loan operations.
For the owner Tenant governance, configurable revenue and oversight.	For assurance Evidence, reconciliation and controlled release.

Buyer conversation Relate this page to the prospect's current lending process and identify which manual, cash or fragmented step LoanHub will replace.

LOANHUB PRODUCT PROSPECTUS

Online, walk-in and internal lending

LoanHub supports three acquisition paths: borrower-created marketplace requests; loan-officer-assisted walk-in applications; and internal applications for selected existing clients.

Illustrative interface/engineering view based on the analysed LoanHub release. Operational values are loaded from live records.

Commercial importance

This means digital transformation does not exclude customers who arrive at a branch or need assistance.

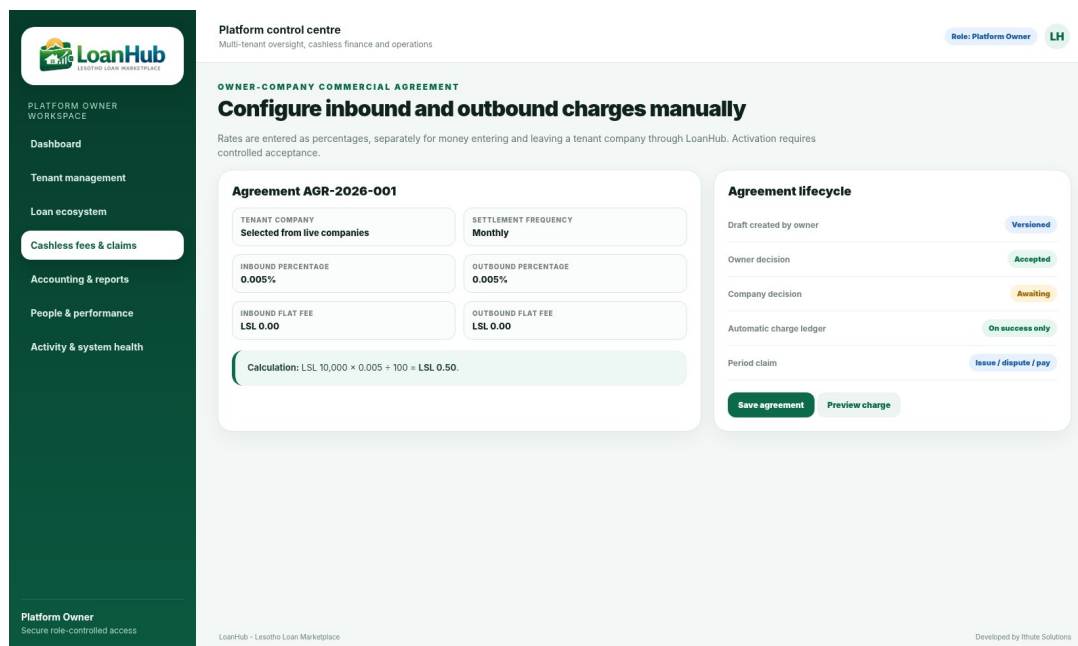

For borrowers Accessible requests, comparable offers and traceable payments.	For lenders One system for online, walk-in and direct loan operations.
For the owner Tenant governance, configurable revenue and oversight.	For assurance Evidence, reconciliation and controlled release.

Buyer conversation Relate this page to the prospect's current lending process and identify which manual, cash or fragmented step LoanHub will replace.

LOANHUB PRODUCT PROSPECTUS

Commercial revenue model

The owner may configure borrower request fees, assisted account-opening charges, subscriptions and transaction-charge agreements. Each source must be disclosed, configured and settled electronically.

Platform control centre
Multi-tenant oversight, cashless finance and operations

Role: Platform Owner **LH**

OWNER-COMPANY COMMERCIAL AGREEMENT
Configure inbound and outbound charges manually

Rates are entered as percentages, separately for money entering and leaving a tenant company through LoanHub. Activation requires controlled acceptance.

Agreement AGR-2026-001

LoanHub - Lesotho Loan Marketplace

Developed by Ithute Solutions

Illustrative interface/engineering view based on the analysed LoanHub release. Operational values are loaded from live records.

Commercial importance

The model supports platform sustainability while keeping charges visible and auditable.

For borrowers Accessible requests, comparable offers and traceable payments.	For lenders One system for online, walk-in and direct loan operations.
For the owner Tenant governance, configurable revenue and oversight.	For assurance Evidence, reconciliation and controlled release.

Buyer conversation Relate this page to the prospect's current lending process and identify which manual, cash or fragmented step LoanHub will replace.

LOANHUB PRODUCT PROSPECTUS

0.005% example

When an agreement is configured at 0.005%, the calculation is gross amount $\times 0.005 \div 100$. On LSL 10,000, the charge is LSL 0.50.

Commercial importance

The interface and documentation must not confuse a percentage with the decimal multiplier 0.005.

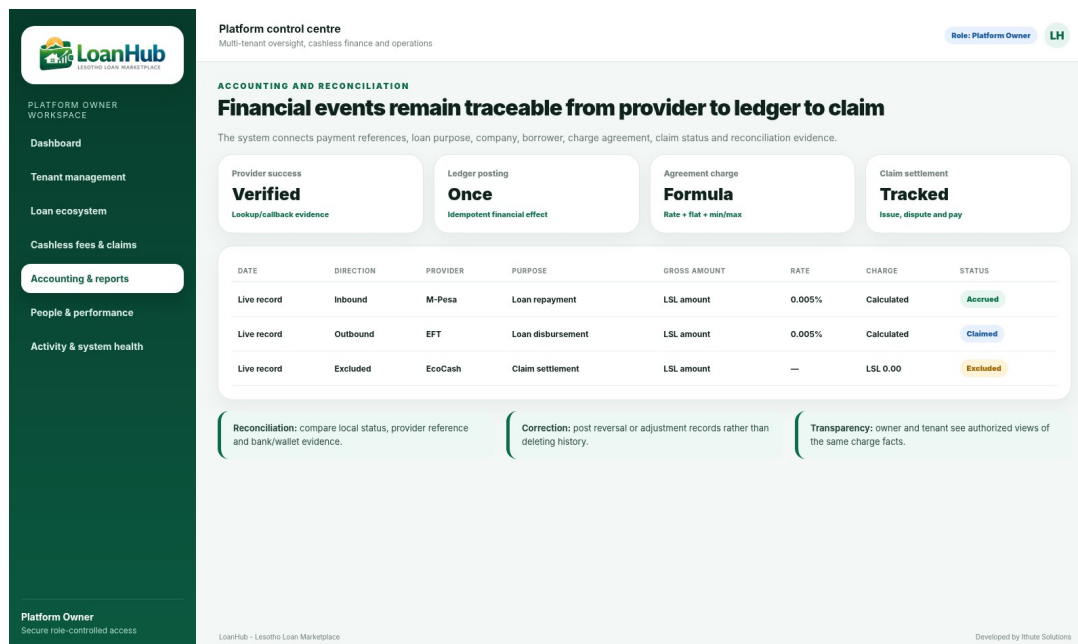

For borrowers Accessible requests, comparable offers and traceable payments.	For lenders One system for online, walk-in and direct loan operations.
For the owner Tenant governance, configurable revenue and oversight.	For assurance Evidence, reconciliation and controlled release.

Buyer conversation Relate this page to the prospect's current lending process and identify which manual, cash or fragmented step LoanHub will replace.

LOANHUB PRODUCT PROSPECTUS

Trust through transparency

Authorized owner and company users can review agreement terms, charge-ledger rows, claims, payment references and status.

Platform control centre
Multi-tenant oversight, cashless finance and operations

Role: Platform Owner LH

ACCOUNTING AND RECONCILIATION

Financial events remain traceable from provider to ledger to claim

The system connects payment references, loan purpose, company, borrower, charge agreement, claim status and reconciliation evidence.

Provider success
Verified
 Lookup/callback evidence

Ledger posting
Once
 Idempotent financial effect

Agreement charge
Formula
 Rate + flat + min/max

Claim settlement
Tracked
 Issue, dispute and pay

DATE	DIRECTION	PROVIDER	PURPOSE	GROSS AMOUNT	RATE	CHARGE	STATUS

Live record	Outbound	EFT	Loan disbursement	LSL amount	0.005%	Calculated	Claimed
Live record	Excluded	EcoCash	Claim settlement	LSL amount	—	LSL 0.00	Excluded

Reconciliation: compare local status, provider reference and bank/wallet evidence.

Correction: post reversal or adjustment records rather than deleting history.

Transparency: owner and tenant see authorized views of the same charge facts.

Platform Owner
Secure role-controlled access

LoanHub - Lesotho Loan Marketplace

Developed by Ithute Solutions

Illustrative interface/engineering view based on the analysed LoanHub release. Operational values are loaded from live records.

Commercial importance

Trust comes from shared evidence and defined dispute paths, not from hiding calculations.

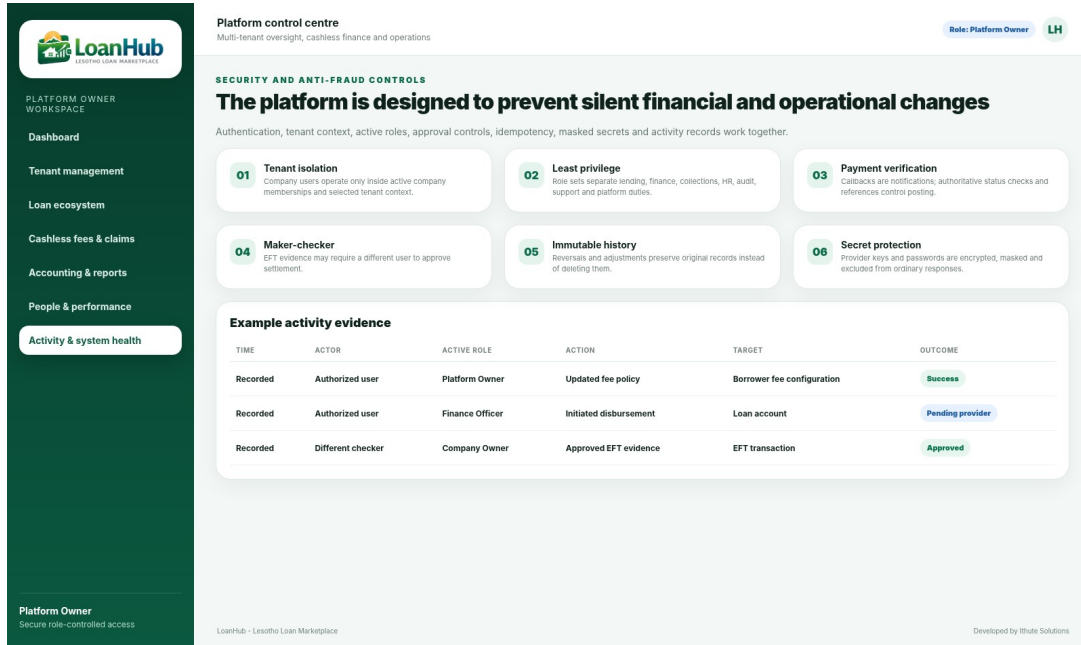

For borrowers Accessible requests, comparable offers and traceable payments.	For lenders One system for online, walk-in and direct loan operations.
For the owner Tenant governance, configurable revenue and oversight.	For assurance Evidence, reconciliation and controlled release.

Buyer conversation Relate this page to the prospect's current lending process and identify which manual, cash or fragmented step LoanHub will replace.

LOANHUB PRODUCT PROSPECTUS

Operational control

Branches, role memberships, active role selection, maker-checker, support cases, activity logs and system errors make accountability part of daily work.

Platform control centre
Multi-tenant oversight, cashless finance and operations

Role: Platform Owner LH

SECURITY AND ANTI-FRAUD CONTROLS
The platform is designed to prevent silent financial and operational changes
Authentication, tenant context, active roles, approval controls, idempotency, masked secrets and activity records work together.

- 01 Tenant isolation**
Company users operate only inside active company memberships and selected tenant context.
- 02 Least privilege**
Role sets separate lending, finance, collections, HR, audit, support and platform duties.
- 03 Payment verification**
Callbacks are notifications, authoritative status checks and references control posting.
- 04 Maker-checker**
EFT evidence may require a different user to approve settlement.
- 05 Immutable history**
Reversals and adjustments preserve original records instead of overwriting them.
- 06 Secret protection**
Provider keys and passwords are encrypted, masked and excluded from ordinary responses.

Example activity evidence

TIME	ACTOR	ACTIVE ROLE	ACTION	TARGET	OUTCOME
Recorded	Authorized user	Platform Owner	Updated fee policy	Borrower fee configuration	Success
Recorded	Authorized user	Finance Officer	Initiated disbursement	Loan account	Pending provider
Recorded	Different checker	Company Owner	Approved EFT evidence	EFT transaction	Approved

Platform Owner
Secure role-controlled access

LoanHub - Lesotho Loan Marketplace

Developed by Ithute Solutions

Illustrative interface/engineering view based on the analysed LoanHub release. Operational values are loaded from live records.

Commercial importance

A complete lending system must manage people and exceptions, not only the happy-path loan.

For borrowers Accessible requests, comparable offers and traceable payments.	For lenders One system for online, walk-in and direct loan operations.
For the owner Tenant governance, configurable revenue and oversight.	For assurance Evidence, reconciliation and controlled release.

Buyer conversation Relate this page to the prospect's current lending process and identify which manual, cash or fragmented step LoanHub will replace.

LOANHUB PRODUCT PROSPECTUS

Market differentiation

LoanHub combines marketplace lending, tenant loan management, cashless routing, commercial fee governance, direct lending, embedded communication and platform employee roles.

Commercial importance

The combination is more valuable than each feature in isolation because records remain connected.

For borrowers Accessible requests, comparable offers and traceable payments.	For lenders One system for online, walk-in and direct loan operations.
For the owner Tenant governance, configurable revenue and oversight.	For assurance Evidence, reconciliation and controlled release.

Buyer conversation Relate this page to the prospect's current lending process and identify which manual, cash or fragmented step LoanHub will replace.

LOANHUB PRODUCT PROSPECTUS

Implementation approach

A buyer moves from discovery to configuration, data preparation, sandbox integration, UAT, training, pilot, reconciliation and controlled production.

Commercial importance

The implementation method is part of the product because financial software must be adopted safely.

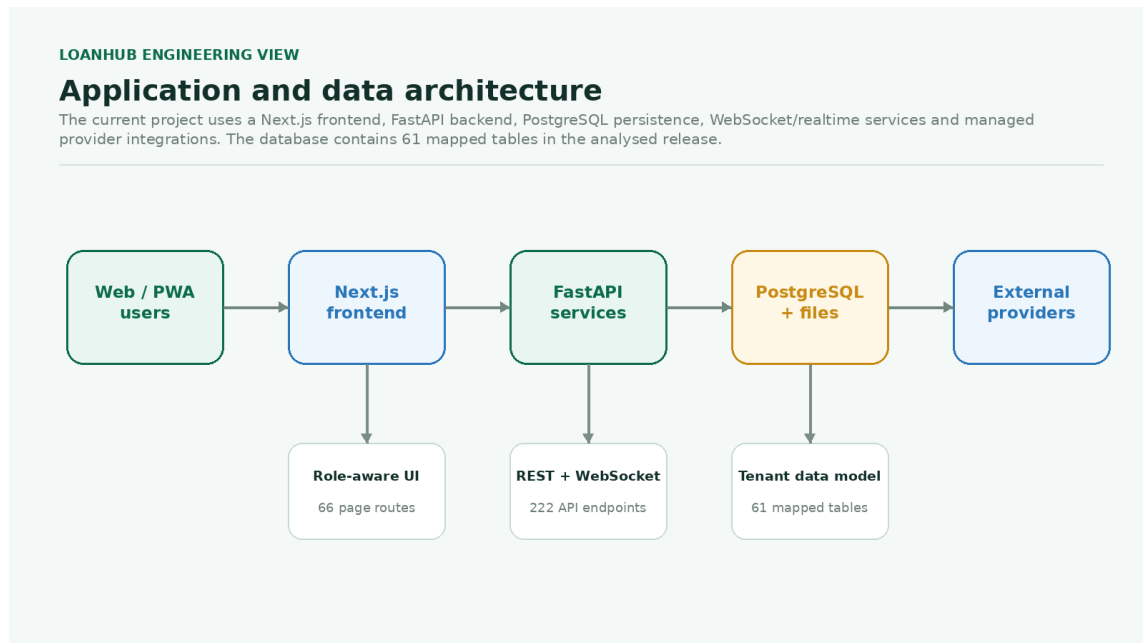

For borrowers Accessible requests, comparable offers and traceable payments.	For lenders One system for online, walk-in and direct loan operations.
For the owner Tenant governance, configurable revenue and oversight.	For assurance Evidence, reconciliation and controlled release.

Buyer conversation Relate this page to the prospect's current lending process and identify which manual, cash or fragmented step LoanHub will replace.

LOANHUB PRODUCT PROSPECTUS

What is engineered now

The analysed release contains 66 frontend page routes, 222 backend API routes, 61 mapped database tables and 21 defined roles. Core marketplace, tenant, borrower, cashless, reporting and operational modules are represented in source.

Illustrative interface/engineering view based on the analysed LoanHub release. Operational values are loaded from live records.

Commercial importance

These counts describe the analysed codebase, not provider certification or production usage.

For borrowers Accessible requests, comparable offers and traceable payments.	For lenders One system for online, walk-in and direct loan operations.
For the owner Tenant governance, configurable revenue and oversight.	For assurance Evidence, reconciliation and controlled release.

Buyer conversation Relate this page to the prospect's current lending process and identify which manual, cash or fragmented step LoanHub will replace.

LOANHUB PRODUCT PROSPECTUS

What remains external

Live M-Pesa, EcoCash and bank operation requires valid merchant accounts, provider-issued credentials, product approval, callback/network configuration and external UAT. Legal, accounting and data-protection reviews remain deployment responsibilities.

Commercial importance

The sales process should be honest about this boundary.

For borrowers Accessible requests, comparable offers and traceable payments.	For lenders One system for online, walk-in and direct loan operations.
For the owner Tenant governance, configurable revenue and oversight.	For assurance Evidence, reconciliation and controlled release.

Buyer conversation Relate this page to the prospect's current lending process and identify which manual, cash or fragmented step LoanHub will replace.

LOANHUB PRODUCT PROSPECTUS

Buyer outcomes

The intended outcomes are shorter and more consistent application processing, less cash handling, better branch visibility, transparent platform charges, stronger evidence and more structured borrower service.

Commercial importance

Outcome measurement should be agreed during implementation rather than invented in the brochure.

For borrowers Accessible requests, comparable offers and traceable payments.	For lenders One system for online, walk-in and direct loan operations.
For the owner Tenant governance, configurable revenue and oversight.	For assurance Evidence, reconciliation and controlled release.

Buyer conversation Relate this page to the prospect's current lending process and identify which manual, cash or fragmented step LoanHub will replace.

LOANHUB PRODUCT PROSPECTUS

Buyer due diligence

Prospective customers should evaluate product fit, security controls, provider coverage, integration responsibilities, data governance, support, migration, recovery and total implementation effort.

Commercial importance

The manual is designed to answer those questions clearly.

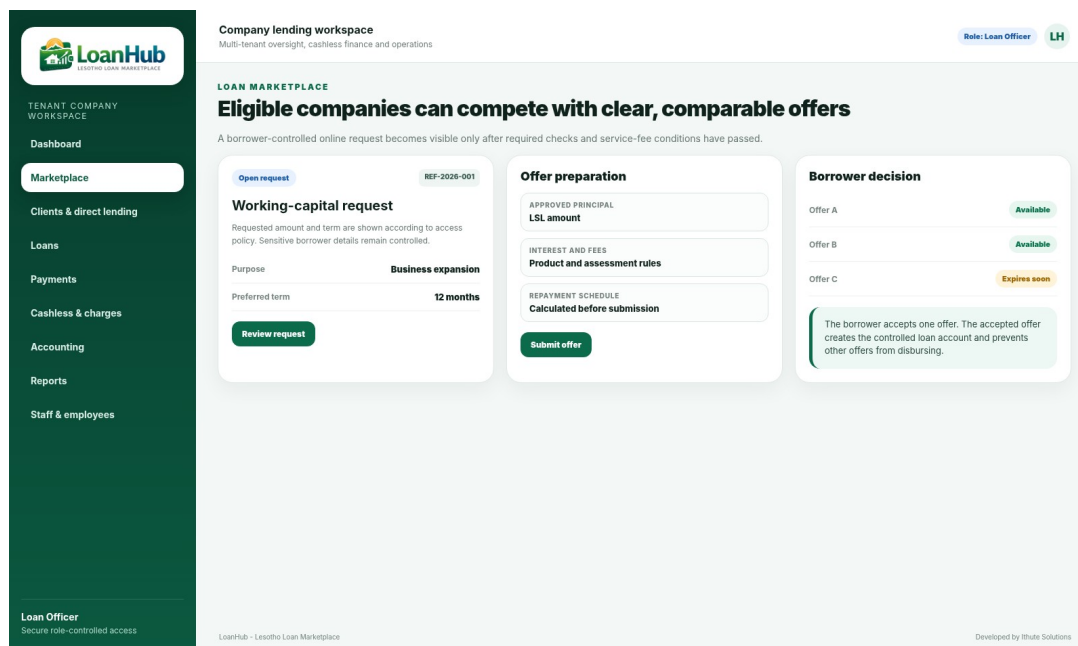

For borrowers Accessible requests, comparable offers and traceable payments.	For lenders One system for online, walk-in and direct loan operations.
For the owner Tenant governance, configurable revenue and oversight.	For assurance Evidence, reconciliation and controlled release.

Buyer conversation Relate this page to the prospect's current lending process and identify which manual, cash or fragmented step LoanHub will replace.

LOANHUB PRODUCT PROSPECTUS

Demonstration storyline

A strong demonstration follows one borrower from registration to request fee, lender offer, acceptance, electronic disbursement, repayment, charge-ledger entry and report. It then shows an internal walk-in case and a support/audit trace.

The screenshot displays the 'LoanHub' Tenant Company Workspace interface. On the left is a dark green sidebar with navigation links: Dashboard, Marketplace (selected), Clients & direct lending, Loans, Payments, Cashless & charges, Accounting, Reports, and Staff & employees. The main content area is titled 'Company lending workspace' and 'Multi-tenant oversight, cashless finance and operations'. It features a 'Loan Marketplace' section with the headline 'Eligible companies can compete with clear, comparable offers'. Below this, a 'Working-capital request' form is shown with fields for 'Purpose' (Business expansion), 'Preferred term' (12 months), and a 'Review request' button. To the right, an 'Offer preparation' section includes fields for 'APPROVED PRINCIPAL', 'LSL amount', 'INTEREST AND FEES', 'Product and assessment rules', 'REPAYMENT SCHEDULE', and 'Calculated before submission', with a 'Submit offer' button. Further right, a 'Borrower decision' section lists three offers: Offer A (Available), Offer B (Available), and Offer C (Expires soon). A summary box states: 'The borrower accepts one offer. The accepted offer creates the controlled loan account and prevents other offers from disbursing.'

Illustrative interface/engineering view based on the analysed LoanHub release. Operational values are loaded from live records.

Commercial importance

This tells a business story rather than clicking unrelated menus.

For borrowers Accessible requests, comparable offers and traceable payments.	For lenders One system for online, walk-in and direct loan operations.
For the owner Tenant governance, configurable revenue and oversight.	For assurance Evidence, reconciliation and controlled release.

Buyer conversation Relate this page to the prospect's current lending process and identify which manual, cash or fragmented step LoanHub will replace.

LOANHUB PRODUCT PROSPECTUS

Commercial proposal positioning

Position LoanHub as digital lending infrastructure and managed operational transformation. The proposal should distinguish platform licensing/services, provider costs, tenant commercial charges and implementation work.

Commercial importance

Do not present external provider fees as LoanHub revenue.

For borrowers Accessible requests, comparable offers and traceable payments.	For lenders One system for online, walk-in and direct loan operations.
For the owner Tenant governance, configurable revenue and oversight.	For assurance Evidence, reconciliation and controlled release.

Buyer conversation Relate this page to the prospect's current lending process and identify which manual, cash or fragmented step LoanHub will replace.

LOANHUB PRODUCT PROSPECTUS

Importance to Lesotho

A locally positioned loan marketplace can improve access, digitize lender operations and support electronic financial accountability. Local payment and regulatory realities must guide activation.

Commercial importance

The product name and interface identify LoanHub as the Lesotho Loan Marketplace.

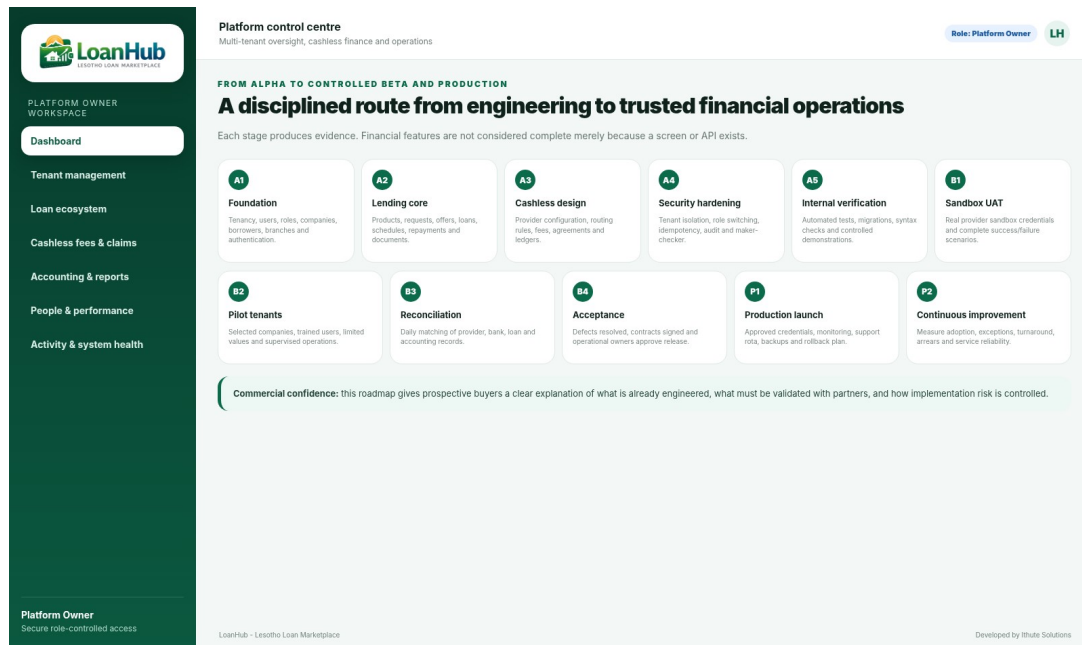

For borrowers Accessible requests, comparable offers and traceable payments.	For lenders One system for online, walk-in and direct loan operations.
For the owner Tenant governance, configurable revenue and oversight.	For assurance Evidence, reconciliation and controlled release.

Buyer conversation Relate this page to the prospect's current lending process and identify which manual, cash or fragmented step LoanHub will replace.

LOANHUB PRODUCT PROSPECTUS

Product promise

LoanHub aims to make lending accessible, operationally controlled, electronically traceable and commercially transparent for borrowers, companies and the platform owner.

Illustrative interface/engineering view based on the analysed LoanHub release. Operational values are loaded from live records.

Commercial importance

Every release decision should be tested against that promise.

For borrowers Accessible requests, comparable offers and traceable payments.	For lenders One system for online, walk-in and direct loan operations.
For the owner Tenant governance, configurable revenue and oversight.	For assurance Evidence, reconciliation and controlled release.

Buyer conversation Relate this page to the prospect's current lending process and identify which manual, cash or fragmented step LoanHub will replace.

NEXT STEP

Commercial discovery and implementation workshop

The recommended next step is a structured workshop covering borrower channels, lender operations, branches, products, provider accounts, banks, fees, agreements, roles, reports, data migration, security, support and rollout.

- Confirm target users and lending processes.
- Map all inbound and outbound cash flows.
- Identify M-Pesa, EcoCash and bank account ownership.
- Agree fee disclosures and owner-company commercial terms.
- Select sandbox and pilot participants.
- Produce a signed implementation, UAT and support plan.

Positioning LoanHub - Lesotho Loan Marketplace, developed by Ithute Solutions.
